TITLE. Installation instru	uctions for TSC T10 isolato	rs supplied with height	adjusters.
seating for each group	the machines should be con of isolators. The purpose of adjustment of isolator loading	structed to form a rigid a of the height adjuster is	and reasonably level to level the machine
HEIGHT ADJU TSC T10 ISOLATO		Т46 ±1.0 146 ±1.0 РРЕLOADED НЕІСНТ	

Figure 1

- 2. The isolators should be examined to ensure they are of the correct size and variant. If appropriate, the positions for different variant should be located in accordance with our recommendations or drawings.
- Position blocks to support the machine in a level state with the smallest mounting space set at 183 mm high. This value is based upon the seating being out no more than 9 mm from highest to lowest point within the isolator envelope, see example in figure 2.

NON CONTROLLED UNLESS STATED OTHERWISE       DATE       21 May 2019         ITTLE       Installation instructions for TSC T10 isolators supplied with height adjusters.         ITTLE       Installation instructions for TSC T10 isolators supplied with height adjusters.         4. Locate the TSC T10 isolators (including height adjusters) between the machine frame and seating. Loosely engage isolator top and bottom hold down fixing botts to ensure alignment of height adjusters and isolators. Turn the upper portion of the adjuster, so that all height adjusters are to the machine frame. See example in figure 3. At no stage during the installation procedure should the height adjuster exceed 45 mm in height.         ITTLE       ISOLATOR WITH HEIGHT ADJUSTER         Image and the machine on jacks in order to remove the block supports and then release the jacks evenly to transfer the machine weight onto the isolators.         6. States the machine on jacks in order to remove the block supports and then release the jacks evenly to transfer the machine weight onto the isolator fixing botts must not strain the isolator in any direction. The isolator fixing botts. Note: Isolator fixing botts must not strain the isolator in any direction. The isolator top fixing botts material grade 8.8 (supplied by others) be tightened to their bitstalled in accordance with our recommendations.         The tense isolator save not designed for tensile or shear loading applications, and should only be installed in accordance with our recommendations.         The tense isolator system can be seriously impaired if the system is connected to rigid pipes, epissible failure of the connections.         The isolator system can be seriously impair	TECHNICAL DATA SHEET		PAGE	2 of 2
